For the best of reasons

Global warming

may be the defining issue of our time. We face long-term, global challenges without straightforward solutions. Yet there are cost-effective steps we can take now as individuals and organizations that collectively will make a difference. To address these concerns, Noblis initiated a program to aid professional services organizations in verifying their Greenhouse Gas (GHG) Inventories. The program reviews and evaluates an organization's assessment of their emissions. Verified assessments could be used to document GHG impacts.

The Noblis program is founded on several standards-based protocols in anticipation of future government requirements and policies. It stems from the International Standards Organization (ISO) 14064-3 and 10465 on validating and verifying an organization's GHG assertions.

Noblis is a nonprofit science, engineering and strategy company with a history of impartiality and objectivity, assuring our partners and clients that the verification Noblis provides will be trusted.

Noblis' approach to the verification process draws on the expertise of our energy and environmental professionals who have extensive experience in atmospheric science, information auditing, energy analysis and assessment, and related fields.

When you contact us, Noblis professionals work with you to understand the level of assurance you seek and to develop a plan for meeting your objectives with an appropriate scope and level of detail. When a Greenhouse Gas Inventory Report is submitted it undergoes technical evaluation and rigorous quality control. Noblis has built steps into the process to ensure independence, objectivity and open communication with our clients so that the information and methods used are robust.

Addressing climate change responsibly requires credible information about GHG inventories and removals.

Through Noblis' own GHG Inventory Report, we have been recognized as a Founding Reporter with the The Climate Registry. The Greenhouse Gas Verification Program is applying for accreditation with the American National Standards Institute. As Noblis pursues this accreditation, we are working with other independent groups to advance the validity of climate-related claims so that credit is given where credit is due.
