Noblis Releases Mobile Application of the U.S. General Services Administration's Sustainable Facilities Tool

SF Mobile is now available as a free app from iTunes

FALLS CHURCH, Va—May 31, 2011—Noblis, Inc., a leading science, technology, and strategy organization with a proven record of success working in sustainable practices and operations, announced today that SF Mobile, a cross-platform mobile application of the U.S. General Services Administration's (GSA's) [Sustainable Facilities Tool \(SF Tool\)](#), is now available in the iTunes App Store.

The SF Tool and its new mobile counterpart, SF Mobile, were designed to help users develop strategies, standards, guidance, and measures to improve operational performance and spur achievement of federal sustainability goals.

SF Mobile gives users access to sustainable building information and design guidance for interior space projects. It helps users identify and prioritize cost-effective, sustainable strategies for workplace projects, especially those less than 10,000 sq. ft.

The app features 3-D representations of office interiors and built-in material comparisons, as well as design guidance, and a rich, searchable glossary of commonly used terms. Where further detail is appropriate, SF Mobile links directly to the online Sustainable Facilities Tool. SF Mobile is intended for building occupants and owners as well as property and project managers and developers who seek guidance about sustainability, why it matters, and how to implement sustainable solutions.

"The demand for the SF Tool has exceeded our expectations," says Mile Corrigan, Sustainability Manager, Noblis. "It has been so popular that extending its functionality by creating a mobile version that could be used in the field was a logical next step."

To download a free copy of the tool, search "SF Mobile" in the search box at the Apple App store. Noblis is also developing mobile applications of the SF Tool for the Droid and Blackberry. These two applications will be available soon.

Noblis provides expert technical and advisory services in systems engineering, science and technology, program management, and acquisition services to government and industry. We work in essential areas, such as national security, transportation, healthcare, environmental sustainability, and enterprise services, to solve complex scientific, systems, process, and infrastructure problems in ways that benefit the public. In addition to supporting the General Services Administration, we are honored to support organizations with critical national responsibility, including the Department of Homeland Security, Federal Aviation Administration, Centers for Medicare & Medicaid Services, Department of Labor, and National Oceanic and Atmospheric Administration.

The mission of Noblis' Center for Sustainability is to promote resilient and sustainable operations by helping business and government prepare for and mitigate the impact of climate change, improve resource efficiency, and develop solutions to reduce environmental impacts. Our interdisciplinary systems approach addresses a range of sustainability topics, including modeling for future climate change, planning needed to improve resiliency and reduce greenhouse gas emissions, calculate emissions inventories, and energy management.

GSA has been at the forefront of sustainability initiatives within the government and Noblis has been working closely with the GSA to develop a family of sustainability tools including the [GSA Sustainable Facilities Tool](#) and the [GSA Carbon Footprint and Green Procurement Tool](#).
